? Abstract: PURPOSE: To obtain the subject finishing agent capable of imparting softness and resilience to various fibers by blending specific amounts of a neutralized or a quaternized specific amine compound and a specified nonionic surfactant as essential components.

CONSTITUTION: A household liquid softening and finishing agent is obtained by neutralizing a di-long-chain type amine compound expressed by formula I [R1 is 11-23C saturated or unsaturated hydrocarbon; R2 is 12-24C saturated or unsaturated hydrocarbon; R is 1-24C saturated or unsaturated hydrocarbon; (m) is 1-6] with an inorganic or an organic acid or quaternizing the amine compound with CH3Cl and blending (a) the resultant substance with (b) a nonionic surfactant expressed by formula II, III or IV [R3 is 12-24C saturated or unsaturated hydrocarbon; R4 is H or (EO)r(PO)sH (EO is oxyethylene; PO is oxypropylene; (p+q) or (p+q+r+s) is 1-100] in an amount of 1-100 pts.wt. (in the liquid softening and finishing agent) based on 100 pts.wt. component (a). The resultant agent has high stability to preservation for a long period and is excellent in resilience.
